DETAILED ACTION

1. Claims 14-38 are currently pending in the instant application and are subject to the following election of species requirement.

Election of Species

2. An election of species of a particular compound is required. In order for this election to be considered fully responsive to this requirement the election **must include**:

a) the **name** and **structure** of one species of Formula (A), one species of $-PR^1R^1$, and one species of X^*

b) the location of the three species (a) within the claims or (b) within the specification,

c) the claims that read on the process for the production of chiral ligands comprising the three elected species

d) a definition of the exact substitutions,

e.g. R_1 is Hydrogen, X is oxygen, etc...

e) whether X^* is chiral or achiral

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species to be examined even though the requirement may be traversed (37 CFR 1.143) **and (ii) identification of the claims encompassing the elected species**, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1626

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.
